Maintenance free
HDCP compliant
Safety system
Energy saving design
Serial control & Remote diagnose

Built entirely of aluminium and black edged anti-glare glass, the Dynamic3 monitors offer a discreet and timeless design. The anodised finish provides a soft, silky effect, is extremely resilient and also serves to dissipate heat. The glass protects the screen, reduces "mirror" effect, allows for natural transparent colour and can work as a touch surface. The Dynamic3 range provides excellent contrast and unsurpassed viewing angles.

Integration into furniture is extremely easy. The back of the monitor can be covered with leather, Corian or wood, to allow for a uniform table finish when the screen is fully retracted. The system is unique not only in terms of its aesthetics but also in terms of its functionality; the screen rises and leans, has an additional 180 degree rotation movement, and retracts inside the work surface in two different positions, with the monitor oriented up or down.

The touchscreen can be used in a completely flat position, flush with the work surface. These monitors are available in 17" & 19", in semi-automatic & motorised versions. Its sophisticated electronics automatically detect the screen position, orienting the image accordingly. If the sensors detect resistance, the movement is stopped to protect the user. The screen's lifting system automatically activates the elevation of the keyboard and mouse tray.

DynamicX2

5 years limited warranty Automatic 20° tilt Adjustable tilting angle from o° to 20° Interactive setup display Maintenance free **HDCP** compliant Energy saving design Safety system Serial control & Remote diagnose

ynamicX2 are elegant monitors built from a solid aluminium block. They have a vertical motorised movement with an automatic 20° tilt to ensure the best ergonomics, visibility and viewing angle. This automatic tilting system provides a fast, silent and robust response, a highly reliable, maintenance-free solution.

DynamicX2 have slightly curved edges for a sober modern look and they are available with a matt screen finish, with a black edged antireflection glass or with a golden flash.

The range is available from 15" to 22" and it can microphones, speakers, voting systems, USB connectors, camera and keyboard.

The black edged glass can be optionally turned into a multi-touch screen and the anodized aluminium housing can be customised in different colours. The safety system stops the movement if any resistance is detected. They are remotely controllable and diagnosable through the ERT interfaces in an easy and cost effective way.

Serial control & Remote diagnose

ynamic2 monitors offer a timeless, sober and discreet shape with squared edges. Dynamic2 models are elegant monitors built from a solid anodised aluminium block and have an extremely fast and silent lift system. They have a vertical motorised movement with an automatic 20° tilting movement to ensure the best ergonomics, visibility and viewing angle. This automatic tilt system provides a fast, silent and robust response, offering a highly reliable and maintenance-free solution.

The range is available from 12" to 22" and it can be customised with single or double retractable microphones, speakers, voting systems, USB connectors, camera and keyboard. They are available with touch screen and their aluminium housing can be customised in different colours. Monitors are equipped with a safety system, which stops the movements in case of resistance detection. They are remotely controllable and diagnosable through the ERT interfaces in an easy and cost effective way.

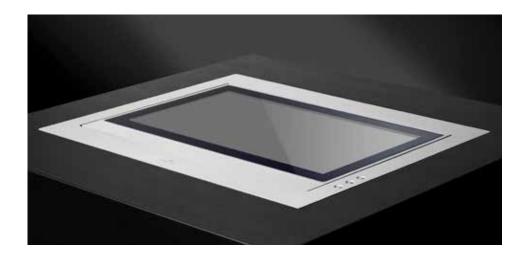

Dynamic1H

ynamic1H provides a horizontal motorised movement. The screen is always visible; it raises and leans and can be stopped and any position between o and 80 degrees. A smart memory system will make easy setting up and recalling the desired tilt position. Built entirely of aluminium and finished with a black edged anti-reflection glass, Dynamic1H are extremely elegant, discreet and timeless. The anodised finish provides a soft, silky effect; it is extremely resilient and serves to dissipate heat.

The glass protects the screen, reduces the "mirror" effect, allows for natural transparent colour and also works as a multi-touch surface (optional). This range is available in 12", 15", 17" and 22" all providing excellent contrast and unsurpassed viewing angles. Dynamic1H monitors are equipped with a safety system which stops the movements if resistance is detected. These monitors are remotely controllable and diagnosable through the ERT interfaces in an easy and cost effective way.

Dynamic1H is extremely easy to install and control, requiring a minimum desk depth. It has an elegant look and it's finished with a blackedged anti-reflection glass.

Integrated universal motorised lift system for
"gooseneck" microphones
Maintenance free
HDCP compliant
Safety system
Energy saving design

ynamic3Talk is a multi-position motorised monitor including an independent lift of "gooseneck" type microphones to be easily integrated into board, meeting and conference tables as well as into information counters; a smart combination of design, technology and ergonomics. It is a unique system for furniture integration, totally built in aluminium and glass. The screen opens and closes with a motorised movement similar to a laptop, with the peculiarity that it can turn 180 degrees. It can be folded into the desk, both with the screen

Serial control & Remote diagnose

facing up or facing down. In the last case, the back of the monitor housing can be covered with leather, wood, or any type of material to obtain a uniform finish of the table surface.

The Dynamic3 product range provides keyboard, mouse and multi-touch screen as options. When the screen is moving up, a tray is automatically raised and the microphone has an independent mechanism. Thus, the user can choose not only the position of the monitor but also the accessibility to the microphone.

Independent lift for monitor & microphone 5 years limited warranty
Automatic 20° tilt with
Adjustable tilting angle from 0° to 20°

Interactive setup display Maintenance free HDCP compliant

Energy saving design Safety system

Serial control & Remote diagnose

ynamicX2Talk is state-of-the-art reliable, retractable, individually addressable and remotely diagnosable monitor which also integrate an independent lift system for "gooseneck" type microphones to be used at conference rooms, meeting rooms, board rooms, auditorium and public areas.

The monitor is silent, fast and extremely elegant with a modern and sober design, made of mechanised and anodised aluminium. The upper table cover plate integrates a mechanism to lift and retract "gooseneck" type microphones equipped with a LED ring which changes color green to red, to indicate the willingness of the user to talk. Furthermore, the system can also integrate

a full HD video camera, becoming a complete audio and video conference station, which can disappear within the desk, when no needed. DynamicX2Talk provides automatic tilting by using only one engine; a system which is protected by an international patent. Its passive cover plate prevents dirt and any kind of object from falling inside the mechanism and the lift system has different speed levels depending on the screen position, having as a result a harmonic drive and eluding abrupt movements. An independent lift for the microphone, with a stylish round hedge has been added to this solution and consequently, the user can choose to have only the screen, only the microphone, both or none.

Dynamic1Twin

Double sided motorised retractable screen 5 years limited warranty Maintenance free Interactive setup display HDCP compliant Energy saving design Safety system Serial control Remote diagnose

ynamic1Twin is a vertically retractable system with double screen. Two monitors are placed back to back in a compact anodised aluminium frame; allowing for the display of different content for a 2 way communication in reception desks, information counters or in meeting and conference room tables with limited space. The screens are only viewed when required, disappearing inside the table desk by the mere push of a button or by remote control.

Dynamic1Twin has an extremely fast lift system with a very low noise level. Very easy to install, these monitors require no maintenance. To protect the user, Dynamic1Twin are equipped with a safety system which stops the movements in case of resistance detection. They are remotely controllable and diagnosable through the ERT interfaces in an very easy and cost effective way.

Double-sided Dynamic 1 Twin monitors can be viewed from both sides simultaneously.

Dynamic1

Maintenance free
Interactive setup display
HDCP compliant
Energy saving design
Safety system
Serial control
Remote diagnose

Built in anodised milled aluminium, these monitors have an extremely fast and silent lift system. Very easy to install, they require no maintenance. These monitors have a vertical movement so the screen is only viewed when required, appearing from and disappearing inside the table desk by the mere push of a button or by remote control.

Dynamic1 models are also available for under the table installation so the table's surface remains totally uniform when the screen is in storage position. The whole product range can be customised adding single or double retractable microphones, speakers, voting systems, USB connectors, cameras and keyboards. Anodisation in different colours is also possible.

DynamicTabLift

Motorised lift system for iPad®
Adaptable to other tablets
Revolving system for horizontal
and vertical positions
Serial control
Remote diagnose
Maintenance free

ynamicTabLift is a motorised lift system for Apple® iPad®. You can easily turn your iPad® into a screen that can be hidden when not in use to ensure a clear working environment. The lift system comes with both vertical and horizontal motorised adjusting in order to create the perfect viewing angle by tilting the monitor to a maximum of 20 degrees. An advanced fixing mechanism ensures a steady position of the iPad® even when the touch-screen is in use.

The upper cover plate is made of brushed stainless steel to ensure durability and nice design at the same time. Different colours and an embedded power supply are possible as well. This lift system can be controlled locally using the two buttons located on the cover plate, remotely through external GPI controls (contact closure) or AHnet Protocol (RS422).

DynamicSignatureDisplay

Double or single side
Stretched screen
Internal embedded computer
Software provided
Maintenance free
HDCP compliant
Energy saving design
Safety system
Serial control & Remote diagnose

ynamicSignatureDisplay is a retractable digital labelling solution for auditorium, institutions and public communication spaces in general. The product consists in a vertically motorised retractable single or double side stretched screen and a Linux based software which allows an easy display of a picture and name or any digital content in full colour.

In the double screen version, the two screens are placed back to back in a compact, anodised aluminium frame, allowing the display of different information on each of them. Thus, the side facing the audience will show the picture

and name of the conference participant, while the other side can display necessary data for the viewer.

The screens are only visible when needed, and they keep a minimum height, disappearing within the table desk through the push of a button or remotely controlled through RS-485. They provide an extremely fast and silent retractable system, a safety system and require no maintenance. The solution comprises a Linux based software which allows an easy display of picture and text, ideal for name tagging applications over a single CAT-5 cable per screen.

DynamicVision

Motorised Wall mount for video conference cameras RS-422 and Infrared controllable Customisable cover

DynamicVision

Designed for wall integration.

DynamicVision conceals and reveals the video camera at the users will.

ntegrated motorised wall mount for video conference cameras and controls. Unveiling the camera upon request through RS-232, AHnet, Infrared, contact closer and SCT Coded Control Interface when needed, and storing it away when not in use, for a safe and controlled working environment and for protection of the camera. The front enclosure moves vertically up unveiling the camera, the tray then moves the camera forward simultaneously.

DynamicVision serves the system Integrator, the architect, the interior designer and the space planner with a superior solution to do their job.

INSTALLER

The pre-installation frame is the perfect solution to take away the coordination headache between the system integrator and the architects / constructers. It can be delivered separately to be installed into the wall at anytime, pointing out the placement of cables and power. Furthermore the DynamicVision helps the system integrator to easily bring and manage the cables and connectors simplifying the connectivity.

ARCHITECT/DESIGNER/SPACE PLANNER

Why should modern technology be in your way and not at your side? DynamicVision provides a straight forward solution to hide the video conference camera and control, enhancing the interior with its easily adaptable front enclosure which can be covered with fabric, wallpaper and lighter, rigid materials or paint.

DynamicTalk

A LED light ring indicates the status by changing colour from green to red

OPTIONS:

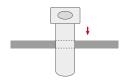

his unique system not only makes the microphone disappear within the desk surface but also provides a pleasant interior light to indicate its status. Microphones are safely stored and protected, making meeting and conference spaces more versatile as the tables can be used for different purposes. The system includes a light ring that shines in the base when the microphone is in raised position. The cover plate is made of brushed stainless steel and can be veneered with different materials for a less intrusive table surface desk and to perfectly match the table finish.

Universal motorised lift system for "gooseneck" microphones Dynamic Light LED ring indicates microphone status Serial control & Remote diagnose Easy to install Maintenance free

Designed to be inserted into the table top.

DynamicTalk has 2 different working modes; PA and Conference. When in PA mode, a push button placed on the cover plate, allows to activate or de-activate the microphone. A LED light ring will indicate the status by changing colour, from green to red. The system will silence the microphone when this is in retracted position. When in Conference mode, the microphone will always be active and both the light ring and the access to the push button on the cover plate will be available through a connector (GPI/GPO). In this mode, the system is ready to be connected and controlled through a conference system.

DynamicTalk is available in 3 standard sizes, 400mm, 500mm, 600mm, for short, medium and large microphones with XLR connector. It is also available in customised versions for all types and sizes of conference microphones with optional integration of manufacturer's interfaces on the cover plate.

different sizes and brands of

Book

Manually foldable, from 75° to o° Totally adjustable position No need to modify desk surface HDCP compliant Maintenance free

Book is a manually foldable aluminium monitor in anodised finish and dark cast iron base with a flush anti glare protection glass screened with an elegant black frame. Tired of monitors that become too intrusive? Book is the ideal solution for auditorium, tele presence, meeting and conference rooms and information counters. With a height that can be easily adjusted, they do not require structural changes on the table desk and can also be interactive optionally. Book is available in sizes 17" and 19".

BookTop

Manually foldable
Adjustable viewing angle to 110°
Ready for desk mounting
HDCP compliant
Easy to install
Maintenance free
Energy saving design

OPTIONS:

BookTop is a manually foldable monitor. It can be opened to a working position of IIO° and it can be manually folded on the table surface with the screen facing down.

BookTop has been designed for a very easy installation on standard furniture and it is extremely elegant and compact. The monitor is entirely built in solid milled aluminium with a natural anodised finish and has antireflection black edged glass which can be a multi-touch screen (optional).

BookTop is available in 22".

DeskTop

Optimised height Manual tilt Compact design Maintenance free

OPTIONS:

legant desktop monitors manufactured in solid milled aluminium with a light tilting base and anodised finish. If you need a small monitor, with optimised height to be used in institutions, reception areas and information counters, Desktop is just the most exclusive solution. Desktop monitors are available in 12", 15" and 17". Other sizes upon request.

Table integration monitors No visible cabling Below table connectivity Adjustable viewing angle Rotatable 160 degrees Maintenance free

able integration monitors with their base built into the table or desk. Elegant screens specially designed for fixed table installation are made of milled aluminium with a stylish protective glass panel with black marking and a support made of brushed stainless steel. The cables hide inside the steel support and under the table to the connection point. Gooseneck monitors are available in 19".

ERT Interface & AHnet

Remote control Remote diagnose E-mail alarm system Energy optimisation Factory service

rthur Holm provides an easy and practical system to control and diagnose the monitors. The ERT Interface helps to lower the installation costs in terms of equipment and time. Based on a DIN rail system, they are extremely easy to install and to cable. The ERT Interface not only makes the installation faster but it also eliminates the need of external relay boxes and of extra power outlets. It provides astonishing features such as reporting the status of the monitors by e-mail.

The AHnet Software makes extremely easy the control of the monitors, facilitating their installation and administration. It gives feedback from each device, allowing on site or remotely located staff to get the status of up to 900 screens. This feature allows an optimal preparation of events in advance.

AHnet Software is operated through RS-422 or RS-485. The ERT Interface connects the monitors directly to a PC or via a local network, a tablet or iPad®, or by any standard control system. The open AHnet protocol is the most cost effective solution on the market for the installation and use of motorised Arthur Holm and Albiral monitors. No additional power sources or distribution boxes are needed.

The AHnet solution can send e-mail updates on the monitor status, by using standard e-mail accounts and can also provide Arthur Holm service staff to remotely access the installation. It can be simultaneously used in an installation with Dynamic1, Dynamic2 / X2, Dynamic3, DynamicTabLift, DynamicTalk and DynamicVision. The program automatically detects the model and activates the relevant menus with different windows for each model.

AHnet Software

ERT Interface

Customisation

We offer a very wide product range and if we don't have the product that your customer requests, we put a team of mechanical, design and electronic engineers at your disposal, with more than 20 years of experience. Don't hesitate to ask! We will work hand by hand with you to make sure that we fulfill your expectations.

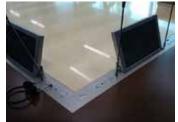

ARTHUR HOLM products can be 100 % personalised according to each customer needs. The products are prepared to integrate options such as motorised retractable microphones, built in camera, voting system, speakers, USB connectors, special switches and keyboard among others.

ARTHUR HOLM custom products have been installed in the World Economic Forum in Switzerland, the Senate of Mexico, the University of Kuwait, the FIBA in Switzerland and in the Tivoli Hotel in Denmark among others. Just contact us and we will be happy to help!

Technology Serving Design

"Five reasons to work with Arthur Holm: Design, technology, quality, flexibility and support"

THE COMPANY

Arthur Holm has its origins in the Danish furniture designer *Jorgen Alex Jensen* who was active during the sixties and the seventies. His design inspiration and his concept of ergonomics have been continued by his family, the design force behind the Arthur Holm product range. The result of combining Scandinavian design tradition with Mediterranean creativity, flexibility and emotion is a wide product range built on more than 20 years of craftsmanship.

THE ART OF CUSTOMISATION

Arthur Holm offers a range of ingenious products whose designs are based on quality materials and the latest technology. Products which endow meeting and conference rooms with silent, ergonomic, innovative and aesthetic solutions that integrate into the furniture, hang from the walls as works of art or are used as interactive points of information.

THE WORLD OF ARTHUR HOLM

Arthur Holm and Albiral offer a selection of unique, elegant, versatile, flexible and ergonomic products that are being used in meeting and conference rooms, reception areas, auditoriums and public zones of leading companies throughout the world. More than 12.000 installations speak for themselves. It will be our pleasure to work with you, designing your unique environment; our broadcast electronic engineers will provide the latest technology while our design team will offer you the most exclusive appearance.
